## **BEST AVAILABLE IMAGES**

Defective images within this document are accurate representations of the original documents submitted by the applicant.

Defects in the images may include (but are not limited to):

- BLACK BORDERS
- TEXT CUT OFF AT TOP, BOTTOM OR SIDES
- FADED TEXT
- ILLEGIBLE TEXT
- SKEWED/SLANTED IMAGES
- COLORED PHOTOS
- BLACK OR VERY BLACK AND WHITE DARK PHOTOS
- GRAY SCALE DOCUMENTS

**IMAGES ARE BEST AVAILABLE COPY.**

**As rescanning documents *will not* correct images,  
please do not report the images to the  
Image Problem Mailbox.**

What is claimed is:

1. (currently amended) A method to produce water soluble carbohydrates from lignocellulose, which comprises:  
providing lignocellulose containing cellulose and  
providing enzymes to said cellulose, and  
providing a membrane to divide a filtrate containing enzymes, and  
providing enzymes derived from said membrane, to said lignocellulose containing cellulose, and  
combining the extractate, from a previous extraction, containing water soluble carbohydrates and  
[containing] enzymes, with said lignocellulose, and  
hydrolyzing said lignocellulose combined with the extractate at a pH of about 5 to produce water soluble carbohydrates and a lignin residue containing water soluble carbohydrates and enzymes, and  
filtering said residue containing lignins from said water soluble carbohydrates and enzymes to produce a filtrate and a filtered residue, and  
extracting the filtered residue containing lignins with water to substantially extract water soluble carbohydrates and enzymes from the residue to produce a water extracted residue and an extractate for recycle, and  
employing said membrane to substantially divide said filtrate containing water soluble carbohydrates and enzymes to provide water soluble carbohydrates substantially devoid of enzymes and provide enzymes for hydrolysis of cellulose contained in said lignocellulose thereby water soluble carbohydrates substantially devoid of enzymes are formed from lignocellulose and a residue containing lignins substantially devoid of water soluble carbohydrates and enzymes is formed along with enzymes for recycle.
2. (original) The method of claim 1 wherein said hydrolysis is accomplished in a vessel.
3. (original) The method of claim 1 wherein said filtrate is subjected to ultrafiltration to substantially separate enzymes from the water soluble carbohydrates and form a solution substantially devoid of enzymes and recycle the separated enzymes for subsequent hydrolysis of cellulose contained in a lignocellulose.
4. (original) The method of claim 3 wherein the solution containing water soluble carbohydrates, is subjected to hydrolysis and fermentation to form ethanol.
5. (currently amended) The method of claim 1 wherein said lignocellulose is obtained from biomass selected from the group consisting of wood, waste paper and municipal solid waste [including an individual or a combination thereof].

6. (original) The method of claim 1 wherein said lignocellulose is provided from dilute acid hydrolysis of a biomass to provide a lignocellulose substantially devoid of hemicellulose.
7. (currently amended) The method of claim 1 wherein enzymes are selected from the group consisting of cellulase, glucanhydrolase and, cellobiohydrolase [including an individual or a combination thereof].
8. (original) The method of claim 1 wherein said lignocellulose containing cellulose is accessible to enzymes.
9. (original) The method of claim 1 wherein said extractate contains water soluble carbohydrates.
10. (currently amended) The method of claim 1 wherein [said]water soluble carbohydrates, derived by hydrolysis of lignocellulose, contain glucose.
11. (currently amended) The method of claim 1 wherein [said]water soluble carbohydrates, derived by hydrolysis of lignocellulose, contain glucose polymers.
12. (currently amended) The method of claim 1 wherein [said]water soluble carbohydrates, derived by hydrolysis of lignocellulose, contain cellodextrins.
13. (currently amended) The method of claim 1 wherein {said} enzymes derived from ultrafiltration are recycled to provide enzymes to said cellulose contained in a lignocellulose.
14. (currently amended) The method of claim 1 wherein [said]water soluble carbohydrates, derived by hydrolysis of lignocellulose, containing enzymes [are] absorbed by cellulose to provide absorbed enzymes for hydrolysis of cellulose contained in a lignocellulose.
15. (currently amended) The method of claim 1 wherein water soluble carbohydrates, derived by hydrolysis of lignocellulose, are subjected to hydrolysis to form glucose.
16. (original) The method of claim 1 wherein said method is continuous.
17. (original) The method of claim 1 wherein said lignocellulose is obtained from pretreated biomass.
18. (original) The method of claim 1 wherein said lignocellulose is substantially devoid of hemicellulose.
19. (original) The method of claim 1 wherein said lignocellulose is substantially sterilized.
